

MONTHLY REVIEW

Lynx ended February solidly in positive territory as gains in commodities and equities outpaced losses in foreign exchange and fixed income. Long positions in energies were particularly profitable as crude oil prices rose after Saudi Arabia voluntarily cut output beyond levels previously negotiated within OPEC; RBOB gasoline and heating oil prices similarly rallied as many refineries in Texas went offline due to adverse weather and widespread power outages in the region. Industrial metals were also profitable as copper prices climbed on increasing Chinese demand and decreasing South American production. While many major global stock indices ended the month higher due to optimism surrounding the decline in coronavirus cases and better-than-expected corporate earnings, spiking bond yields contributed to a pullback late in the period. Gains were generated from long equity positions in the US and Asia, although sector exposure fell sharply and ultimately went short as February came to a close. The emergence of inflationary concerns resulted in fixed income losses although performance and net exposure varied by region and duration; long positions in shorter-term US instruments were particularly challenging, while short positions in longer-term bonds in the US and Germany produced gains. In foreign exchange, the US dollar fluctuated broadly but rallied sharply over the final two days of the month resulting in a sector loss.

IMPORTANT INFORMATION

Lynx UCITS Fund ("the Fund") is a sub-fund of the Lynx UCITS Funds ICAV (an Irish collective asset-management vehicle) established pursuant to the Irish ICAV Act and the UCITS regulations. Lynx UCITS Funds ICAV is authorised (registration number C184319) to provide UCITS products by the Central Bank of Ireland.

The content of this material has been prepared by Lynx Asset Management AB for the purpose of providing general information regarding the Fund. Lynx UCITS Funds ICAV or Lynx Asset Management AB cannot guarantee or provide any assurance that its investment capabilities will achieve any target, objective or return on capital.

This material shall not be regarded as investment advice. An investor considering investing in the Fund should carefully read the Fund's KIID, prospectus, supplement and subscription documentation.

Investing in funds is associated with risk. Past performance is no guarantee of future return. The value of the capital invested in the Fund may increase or decrease and investors cannot be certain of recovering all of their invested capital.

EXECUTIVE SUMMARY

Strategy	Global managed futures (CTA)
Approach	Systematic, directional, trend following
Instruments	Fixed income, equity index and commodity futures; currency futures and forwards
Targets	Volatility: 18% p.a. before fees Return: High risk-adjusted return Correlation: Low or negative with stock markets
Team	Around 80 employees, the majority within research, system development and trade execution.
Date of inception	Lynx UCITS Fund launched 1 March 2019. Prior, the fund ran on the FundLogic Alternatives platform from 6 June 2014 as MS Lynx UCITS Fund.

NET RETURN SERIES ¹⁾

ASSET MANAGEMENT CONCEPT

Lynx's main approach is systematic trend following applied to a broadly diversified portfolio of markets. Further diversification is achieved by using models over multiple time frames, with holding periods varying from a few days up to a year or more. In order to enhance performance in a non-trending market environment, part of the risk is allocated to diversifying models that exploit other market phenomena than price momentum.

In aggregate, these models are used to make quantitative analyses of data and to identify market situations in which there is an enhanced probability that future price changes will be in a certain direction. By using different models in conjunction with each other on each market, the Program can generate a more stable risk-adjusted return than a pure trend following strategy.

RISK MANAGEMENT

Risk management is an integrated feature in the investment process and Lynx focuses on diversification and portfolio construction. Around 100 futures and forward markets are traded across four sectors; equity indices, fixed income, currencies and commodities. Position sizes are determined based mainly on liquidity and correlations with other markets.

The models operate independently and the portfolio is built "bottom-up" based on the signals from each model. Minimization of each investment's loss is integrated in the design of the models e.g. by using systematic risk-reducing mechanisms. As a result the risk utilization in the fund changes dynamically over time, limiting drawdowns.

Value-at-Risk is used to limit position concentration and the aggregated risk. Three parallel VaR-models are monitored in real-time by the trading desk and there are limits on instrument, asset class and total portfolio level.

A SYSTEMATIC APPROACH

The implementation of the Program is fully systematic. The proprietary models generate buy and sell signals that are executed directly in the electronic markets using internally developed algorithms.

The trading desk is staffed 24 hours a day, monitoring risk levels and the execution process.

The quantitative and systematic approach enables Lynx to make extensive analyses of market relationships, and have an opinion on the direction of a large number of different markets. It also ensures a consistent approach, typically without any bias of being long or short in the markets. Given that the strategy trades only liquid instruments, the approach can

adapt and change exposures when the model's market view changes. CTAs in general and Lynx in particular have historically performed well in volatile markets and during larger crises in equity markets, periods where risky assets and other hedge fund strategies have struggled.

Lynx holds the view that the way markets function changes over time. Consequently, it is important to carry out continuous research to improve the models used in the asset management process. Lynx has a large team of researchers, whose task it is to develop new strategies and models to be used in the Program.

WHY INVEST IN LYNX?

- Lynx creates diversification in a traditional investment portfolio
- Strong track record compared to peer group
- Non-trend following models add value
- Competitive fee structure
- Experienced investment team
- High degree of portfolio and strategy transparency

PORTFOLIO MANAGERS

The Lynx Program is managed by Jonas Bengtsson, Svante Bergström, Daniel Chapuis, Henrik Johansson, Jesper Sandin and David Jansson.

PRODUCT

Structure	A sub-fund to Lynx UCITS Funds ICAV
Manager	KB Associates
Management fee	1% p.a.
Performance fee	20% (over high watermark)
Liquidity	Daily (documentation and payment due 2 banking days before dealing day)
Minimum investment	Class I USD Shares: USD 250,000
Lock-up/gate	None
Depository	HSBC Continental Europe. Dublin Branch
Administrator	HSBC Securities Services (Ireland) DAC
Auditor	KPMG
Inception date	1 March 2019
