

**MONTHLY REVIEW**

Lynx generated a strong gain in March as rising global inflationary pressures were exacerbated by the ongoing military conflict in Ukraine resulting in extreme price movements across asset classes. Long positions in energies were particularly profitable as prices spiked on speculation that sanctions on Russia would extend to oil and gas exports and potentially have a dramatic impact on European inventories; Russia supplies approximately a quarter of the crude oil and nearly 40% of the natural gas to the region. In other commodities, an unprecedented move in nickel traded on the London Metal Exchange (LME) resulted in a solid gain as Russian supply concerns catalyzed a short squeeze which drove prices up by over 100% in a day before the exchange suspended trading. In fixed income, short positions across the US and European yield curves were also highly profitable as rate expectations rose on climbing inflation readings; indications that the US Fed was moving towards a more aggressive hiking trajectory contributed to an extraordinary move in the Eurodollar. Meanwhile, equity gains were due largely to short positions in China as prices fell after their government instituted new lockdown measures to control a surge in COVID-19 infections; concerns surrounding Ukraine and increasing oversight of companies listed on US exchanges also contributed to the weakness. Finally, a long position in the US dollar against the Japanese yen was responsible for most of the gain in currencies as the greenback rose on rising interest rate differentials.

## ABOUT US

Headquartered in Stockholm, Sweden, Lynx Asset Management was founded with the conviction that a systematic approach was optimal to capitalize on the broadest set of investment opportunities. Since 1999, Lynx has developed and implemented innovative and differentiated proprietary algorithms to invest actively in global equities, fixed income, commodities and currencies. With a broad set of systems and trading concepts, we attempt to meet the goals of our investors by offering a combination of established investment programs and customized solutions. And, as has been the case throughout our history, we are developing dynamic new models to take us into the next generation.

## THE PROGRAM

The Lynx Program is our original strategy that was launched in May 2000. It is a diversified managed futures program that aims to deliver high risk-adjusted returns with attractive portfolio characteristics. While the primary approach is systematic trend-following applied across a broad universe of global futures and foreign exchange markets, a portion of the risk is allocated to complementary models that are designed to enhance performance in non-trending market environments. These diversifying models utilize a variety of concepts from quantitative macro to machine learning. The program attempts to identify opportunities across time frames, holding positions from only a few days to over a year.

## RISK MANAGEMENT

Risk management is an integrated feature in the investment process. The models operate independently and the portfolio is constructed based on the signals from each model. Individual models apply systematic risk-reducing mechanisms to minimize losses resulting in a dynamic utilization of the risk budget across the portfolio over time. Value-at-Risk is used to limit position concentration and aggregated risks; limits are applied on the instrument, asset class and total portfolio level.

The figures presented are estimates that are calculated by Lynx Asset Management AB. 1) The net performance figures include interest, costs and fees and reflect the Lynx Fund with a 1% management fee and a 20% performance fee for a SEK investment. Index-figures are based on available data at the time of publication and are subject to revision. 2) Based on daily data for the past 12 months. 3) The Value at Risk is measured using a 1-day, 95% confidence interval. Value at Risk is measured with three models capturing different time horizons and the highest risk figure is presented in this report.

## IMPORTANT INFORMATION

Lynx is a special fund as defined in Chapter 1, Section 11 of the Act (2013:561) on managers of alternative investment funds. This material shall not be regarded as investment advice. An investor considering investing in the fund should carefully read the fund's simplified prospectus, subscription document and the information memorandum containing the fund rules. These documents are available for download at [www.lynxhedge.se](http://www.lynxhedge.se).

Investing in funds is associated with risk. Past performance is no guarantee of future return. The value of the capital invested in the fund may increase or decrease and investors cannot be certain of recovering all of their invested capital. The returns are not adjusted for inflation. The fund has no investments in hard-to-value assets for which no market pricing information is available, e.g. some unlisted/private equity, or model priced instruments for which no industry standard software models are available, e.g. complex, structured, one-off contract.

## VALUE AT RISK BY ASSET CLASS AND TOTAL PORTFOLIO, %<sup>2,3</sup>

## EXECUTIVE SUMMARY

Strategy	Global managed futures (CTA)
Approach	Systematic, directional, trend following
Instruments	Fixed income, equity index and commodity futures; currency futures and forwards
Targets	<b>Volatility:</b> 18% p.a. before fees <b>Return:</b> High risk-adjusted return <b>Correlation:</b> Low or negative with stock markets
Team	Around 80 employees, the majority within research, system development and trade execution.

## KEY POINTS

Management fee	1% p.a.
