

**MONTHLY REVIEW**

The Lynx Program was profitable in May as gains in equities and currencies outweighed losses in commodities and fixed income. Investor sentiment during the month was dominated by the evolving geopolitical situation in the Middle East, persistent inflation concerns and shifting expectations for global central bank policy. In equities, demand remained remarkably resilient despite macro headwinds supported by continued enthusiasm surrounding AI-related investments and generally solid corporate earnings. Largest gains were generated in the KOSPI, NASDAQ and Taiwan stock indices although many major global bourses approached or eclipsed record highs. In foreign exchange, the US dollar generally strengthened against developed market counterparts as investors increasingly priced in a "higher-for-longer" monetary policy environment from the Federal Reserve. Short positions in the Japanese yen and Canadian dollar were particularly profitable. Interestingly, long positions in the currencies of select emerging market commodity exporters, specifically the Mexican peso and South African rand, were also solidly profitable. Meanwhile, commodities were the largest detractors from performance during the month, driven primarily by losses in energy. Oil markets remained exceptionally volatile throughout May as headlines surrounding potential ceasefire negotiations and the reopening of shipping routes through the Strait of Hormuz triggered sharp reversals in crude prices. Long positions in Brent and WTI crude oil, RBOB gasoline and gas oil were the worst performers across the entire asset class. Finally, fixed income was modestly unprofitable due primarily to short positions in Italian and Australian bonds.

### ABOUT US

Headquartered in Stockholm, Sweden, Lynx Asset Management was founded with the conviction that a systematic approach was optimal to capitalize on the broadest set of investment opportunities. Since 1999, Lynx has developed and implemented innovative and differentiated proprietary algorithms to invest actively in global equities, fixed income, commodities and currencies. With a broad set of systems and trading concepts, we attempt to meet the goals of our investors by offering a combination of established investment programs and customized solutions. And, as has been the case throughout our history, we are developing dynamic new models to take us into the next generation.

### THE PROGRAM

The Lynx Program is our original strategy, launched in May 2000. It is a diversified managed futures strategy that aims to deliver high risk-adjusted returns and attractive portfolio characteristics. The core of the program is systematic trend-following, complemented by diversifying models, including quantitative macro and machine learning-based approaches, aimed at enhancing performance in non-trending market environments. The program trades derivative markets across fixed income, currencies, commodities, and equity indices, and aims to identify opportunities across multiple time horizons, with holding periods ranging from a few days to over a year.

### RISK MANAGEMENT

Risk management is an integrated feature in the investment process. The models operate independently and the portfolio is constructed based on the signals from each model. Individual models apply systematic risk-reducing mechanisms to minimize losses resulting in a dynamic utilization of the risk budget across the portfolio over time. Value-at-Risk is used to limit position concentration and aggregated risks; limits are applied on the instrument, asset class and total portfolio level.

The figures presented are estimates calculated by Lynx Asset Management AB. 1) The net performance figures include interest, costs and fees and reflect the Lynx Fund with a 1% management fee and a 20% performance fee. Index-figures are based on available data at the time of publication and are subject to revision. 2) The Value at Risk (VaR) is measured using a 1-day, 95% confidence interval. VaR is measured with three models capturing different time horizons and the highest risk figure is presented. 3) Gross return excludes interest on unencumbered cash. 4) Based on daily data for the past 12 months.

### IMPORTANT INFORMATION

This document is strictly confidential and may not be copied or forwarded without written permission from Lynx Asset Management AB.

Lynx is a special fund as defined in Chapter 1, Section 11 of the Act (2013:561) on managers of alternative investment funds. This material shall not be regarded as investment advice. An investor considering investing in the fund should carefully read the fund's simplified prospectus, subscription document and the information memorandum containing the fund rules. These documents are available for download at [www.lynxhedge.se](http://www.lynxhedge.se).

Investing in funds is associated with risk. **Past performance is no guarantee of future return.** The value of the capital invested in the fund may increase or decrease and investors cannot be certain of recovering all of their invested capital. The returns are not adjusted for inflation. The fund has no investments in hard-to-value assets for which no market pricing information is available, e.g. some unlisted/private equity, or model priced instruments for which no industry standard software models are available, e.g. complex, structured, one-off contract.

## VALUE AT RISK BY ASSET CLASS AND TOTAL PORTFOLIO, %<sup>2,4</sup>

### EXECUTIVE SUMMARY

Strategy	Global managed futures (CTA)
Approach	Systematic, directional, trend following
Instruments	Fixed income, equity index and commodity futures; currency futures and forwards; interest rate swaps
Targets	<b>Volatility:</b> 18% p.a. before fees <b>Return:</b> High risk-adjusted return <b>Correlation:</b> Low or negative with stock markets
Team	Around 100 employees, the majority within research, system development and trade execution.
