

ARE YOU A TEAM PLAYER?

We are looking for a system developer

ABOUT US

We are not like other asset managers. Not only are we unique in Stockholm with our quantitative and systematic investment management approach, but we are also at the forefront of the industry globally. Innovation has been part of our DNA since we started in 1999. At Lynx, we have managed to create a workplace where academic methods and a relentless focus on results are nourished by a friendly, collegial culture. The wellbeing of our employees is very important to us as they are the ones who make us successful. Lynx actively strives towards being an inclusive workplace and we see diversity as a prerequisite for future success.

POSITION SUMMARY

In the role as a system developer, you will be a part of the group responsible for data extraction, transformation, persistence and distribution. The group integrates a growing number of external data vendors providing anything from granular exchange traded data and macroeconomic time series to alternative data with niche usage scenarios.

The development of information systems plays an increasingly important role in maintaining competitiveness in an industry strongly dependent on data. You will collaborate with other system developers at Lynx as well with analysts on the investment side to ensure that the investment models receive the appropriate data in a timely manner. Together with the group you will be responsible for the maintenance, continual development of the existing systems as well as deployment and monitoring of systems.

WHO WE LOOK FOR

To succeed in the role as system developer at Lynx Asset Management we believe that you should either have a secondary education in a relevant field and at least two years of experience or at least five years of experience in system development. Ideally, you have previously dealt with large-scale data systems and flows.

Previous experience in .NET, Kubernetes and software containerization and familiarity with Azure DevOps are desirable. We likewise see any experience with cloud services such as AWS and Azure as a bonus.

While the technical competence is important, to succeed at Lynx Asset Management we also believe that you should share our values in being service minded, attentive and conscientious. Our goal is to be humble while striving for success.

APPLICATION

For this recruitment we are collaborating with Wise IT.

Please provide your curriculum vitae and personal letter via the link
